

Brava was the first viewer invited to join the Designed for EMC program. Brava's reputation for quality view and annotation has made it the #1 viewer choice of EMC Documentum customers.

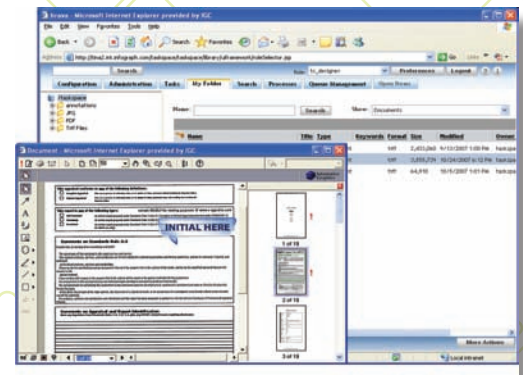

Simple Viewing and Annotation for Transaction-Based Processes

Brava makes it easy for users in high volume, transaction-based environments to complete their tasks efficiently. Brava for TaskSpace has a minimal toolset, so only needed buttons and commands are exposed. And of course the interface can be customized further to meet specific needs.

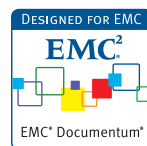

Brava! for Documentum TaskSpace

Features and Benefits Overview

Brava loads files fast, so little time is wasted waiting for the image to display. The annotation tools are intuitive and require no user training. Brava is the perfect, light-weight viewer for transactional processes like loan origination, invoice processing and claims processing.

- Excellent Performance** - In high-volume environments, fast loading is key. Brava loads files quickly and provides thumbnail views of subsequent pages.
- Fidelity** - Excellent fidelity is a must, and Brava has a proven reputation for accuracy.
- Unified Viewer** - Same easy interface for all file types with no training required.
- Page Thumbnails** - Jump right to the page you need without navigating the entire document.
- Annotations Saved As XML** - Annotations are saved in a non-proprietary, open XML format, permitting import/export of annotations and pre- and post-processing as an integral part of any workflow.

Features and Benefits

Key Features		Benefits
View	Unified Viewer	Same easy interface for all file types with no training required. Eliminates need to have native, potentially complicated software on every desktop.
	Performance	Spend less time waiting for files to open and views to refresh than with comparable viewers. Brava has smoother view transitions, too.
	Page Thumbnails	Jump right to the page you need without navigating the entire document/drawing set.
Markup / Annotate	Original Files Untouched	Original files are never modified; annotations are saved as a separate, overlaid XML file.
	Secure & Trackable	Each annotation entity is marked with the creator's username, date and time. Users cannot edit other user's annotations.
	Concurrent Annotations	Each reviewer can create a separately managed annotation file, supporting permission roles and allowing multiple users to comment on the same file at the same time.
	Stamps	Add stock stamps like Approval, Rejected or Cancelled, or create custom stamps. Like all annotation entities, stamps record the creator's username, date and time.
	Consolidate	Select annotation/markup files from multiple reviewers to combine into a single file.
	Changemarks Annotation Review	Changemarks® step reviewers through every comment, ensuring none are missed. This is particularly useful on very large drawings or multi-page documents.
	Print	Print Region
Watermark & Print Banners		Add a watermark or print banners to one or all printouts. Use pre-set wildcards for username, date and more (useful for ISO9000, JCAHO or other compliances). Or intelligently insert metadata as part of your business process.
Print Preview Thumbnail		The print dialog shows a thumbnail view of exactly how the document will print, including scaling, rotation and margins.
Redact	Permanently Block Data, Distribute As PDF/Secure CSF	Block text or an image area before distributing a PDF, TIFF or secure CSF. Blocked text cannot be retrieved in any way.
	Redact By Zones/Text Strings	Define areas in the document to be redacted when published to PDF or secure CSF.
	Find & Redact	Redact all occurrences of a word or phrase. Or create a list of search strings to redact in one step.
	Add Exemption Codes/Redaction Reasons	Add a note to a redaction area indicating the reason and/or code such as Freedom Act or Privacy Act exemption coding.
	Save To PDF, TIFF Or Secure CSF	Redacted documents can be saved to PDF, TIFF or secure CSF. Unlike other redaction tools, redacted text and image data is actually removed from the document while leaving the rest of the document text searchable.
Publish	Save To PDF, TIFF, DWF Or Secure CSF	Save files as PDF, TIFF, DWF or secure CSF. Add annotations, redaction areas, a watermark and print banners. Add security, like feature restrictions, with CSF for more secure distribution and view with the free Brava Reader.
	Save To Secure CSF	Because PDF is an open format, there are many third party products that can translate, convert and edit PDF files. CSF is not an open format because it is intended for secure document sharing over a finite period of time (it is not a long-term archival format). CSFs are compressed, encrypted and text searchable, and support layers, attributes and more. CSF files contain Visual Rights settings, which provide granular control over what a user can do with the file.

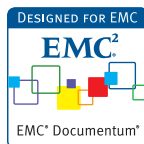

Formats:

- PDF
- **Image formats:** TIFF, JPG, GIF, PNG, BMP and more
- **Office formats*:** Microsoft Word and Excel, WordPerfect and more
- **CAD formats:** DWG, DXF, DWF, DGN, HPGL, SolidWorks, Pro/E and more

*Office formats require an additional license fee.
